EVault® from Carbonite

EVAULT FOR SERVICE PROVIDERS

BACKUP AND RECOVERY POWERED BY EVAULT

When you're faced with multiple complex platforms and systems to support, there's a simple data protection solution that can protect all of them. From software solutions for managing backup to enabling hybrid protection with backup appliances, EVault helps you tailor a solution that meets the needs of your clients and your business.

PRIVATE-LABEL A BDR SOLUTION

EVault gives you everything you need to private-label an enterprise-grade backup and recovery service for your clients. Whether you're installing one of our purpose-built backup appliances at a client site or using our software with the client's hardware, use EVault to power your own solutions that you can deploy anywhere.

COMPREHENSIVE APPLICATION AND HYPERVISOR SUPPORT

Our range of OS Agents supported and Application Aware Agent Plugins include protection for:

Operating Systems and Hypervisors	Supported Applications and Databases
Windows	Microsoft SQL
Linux (RedHat and SuSE)	Microsoft SharePoint
VMware and Hyper-V	Microsoft Exchange
Oracle	Oracle
IBM AIX	
HP-UX	
Solaris	
IBM iSeries	

KEY BENEFITS

Flexible appliance lineup

Software-only options

Broad platform support

System image, application-level or granular recovery

Easy centralized management

Active support community

Comprehensive knowledge base articles

20+ years in the backup industry

Dedicated partner manager

EVAULT FOR
SERVICE PROVIDERS

EVault ®
from Carbonite

EVAULT CORE COMPONENTS

EVault products use three key technology components:

AGENTS

Lightweight agents are installed on each protected server. Once installed, agents track block-level changes and only send changed data to vaults. Agents are managed through a portal interface.

PORTAL

Access the EVault Portal through a Web browser or install it on a networked PC. Monitor backup health, initiate restores, and control agents from a centralized location.
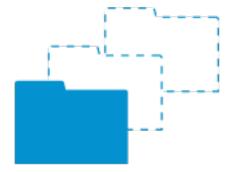

DIRECTOR

EVault Director is an application that manages the storage infrastructure and monitors backups. It is a server application installed on a white-box Windows server, connected to RAID disk that authenticates and then accepts data from the Agent. Flexible deployment options allow you implement it where you want and need it.

ADVANCED TECHNOLOGY AT EVERY STEP

EVault uses proprietary, patented technology to streamline the backup process, minimize bandwidth interference, reduce backup windows and provide maximum security at every step.

Advanced technologies include:

· Quick File Scan

· DeltaPro™ change identification

· Image backup

· Bare metal restore (BMR)

· Centralized dashboard

· Mixed hypervisor support

· 256-bit encryption

PARTNER WITH US

As a service provider, you are tasked with providing top-tier service to your customers. EVault is here to partner with you to make backup simple, seamless, and scalable. EVault offers broad technology support, deep industry expertise, competitive pricing and a partnership that you can grow your business with. We'd love the opportunity to discuss our backup and disaster recovery technology with you.
